EXECUTIVE SUMMARY

Market Problem

Thailand has a strong saving culture but very low investment participation.

Although 87.5% of Thais save money, only around 2.6% actively invest, mainly due to lack of knowledge, fear of loss, and limited access to personalized financial advice.

At the same time, Gen Z and Millennials increasingly learn about investing through social media and digital platforms, while the upcoming virtual banks launching in 2026 will accelerate digital-first financial services.
This creates a large opportunity to transform passive savers into confident investors through AI-driven financial guidance.

Key Opportunity

Three major market gaps exist:

- Idle Money Gap – Millions of savers keep money in low-interest accounts instead of investing
- Advice Gap – Personalized financial advice is still accessible mainly to wealthy investors
- Trust Gap – Market volatility and scandals reduce investor confidence

An accessible and transparent digital advisory solution can unlock this untapped retail investor segment.

Proposed Solution

We propose AI Personal Investment Agent for InnovestX — an AI-powered investment companion that helps users move from saving to investing.

- AI Investment Coach – Personalized portfolio recommendations based on user goals and risk tolerance
- AI Monthly Investment Plan – Smart DCA timing and market insights to optimize entry points
- Personalized Learning Guidance – Investment education tailored to each user's knowledge level

This transforms InnovestX from a trading platform into a personalized financial companion.

Impact & Business Value

The solution aims to:

- Convert >15% of savers into active investors
- Achieve >80% user clarity on AI decisions
- Increase engagement with daily market insights
- Reduce customer acquisition cost by 20–30% through social-driven growth

Ultimately, the platform democratizes investment advice and expands Thailand's retail investor base.
