Situation Analysis & Mega/Market trend

AI-Driven Personalization

Thai investors are rapidly embracing AI for financial decisions and the demand is only growing.

- 48.3% of Thais feel excited about using AI nearly matching the global average, with Gen Z men aged 16–24 being the heaviest users at 43.4%
- AI adoption among Thai businesses rose from 15.2% to 17.8% in one year, with 73.3% of Thai organizations preparing to adopt AI in the near future
- Thailand's AI market is booming ($4.29B by 2030), and 72% of people already use AI.

Mobile-First & Social Learning

Thai Gen Z and Millennials don't learn investing from advisors they learn from their feeds.

- YouTube, TikTok, and Facebook are the top platforms for Thai Gen Z with 58% saying they trust recommendations from creators they follow
- Thai Millennials piece together their investment knowledge from YouTube tutorials, financial influencers on TikTok, and private Telegram groups the era of relying on traditional financial advisors is over
- 76% of Thai Gen Z are on TikTok, and over half (53%) spend 2+ hours daily on the platform more than any other generation

Virtual Banks & Open Finance

Thailand's financial landscape is being disrupted 3 new virtual banks are launching by mid-2026, bringing branchless, AI-powered banking to millions.

- BOT officially awarded 3 virtual bank licenses on June 19, 2025 to SCBX (partnered with WeBank & KakaoBank), Krung Thai & AIS, and CP Group
- All 3 virtual banks must begin operations by June 2026 specifically designed to serve underserved retail and SME customers through digital-only channels
- These virtual banks will target unbanked and underbanked Thais with streamlined onboarding via Thailand's National Digital ID (NDID) and embedded finance in everyday life

User Insight (Retail Invest) and Target Segment

Target Segment	Target Insight	Painpoint
Gen Z (Age 18- 27)	• Learn and invest in one place because they're open to new tech and new asset classes more than any other generation • Trust peers and social media over financial advisors • Thai Gen Z saves and invests an average of 27% of their monthly income they're financially aware and ready to grow	• 80% still keep savings in bank accounts most haven't made the move to investing yet • Top concern: cost of living (37%) followed by unemployment that leaves little room to start investing • Fear of making mistakes and need a guided, step-by-step experience
Millennials (Age 28–43)	• A platform that manages multiple financial goals at once for example savings, investing, and planning etc. • Full transparency no hidden fees, no surprises • Active investors who check their portfolio regularly, but need smarter tools to keep up	• Only 19% of Thai Millennials feel optimistic about their personal finances in the next 12 months down from 38% the previous year • Too busy to research and need AI or other tools to do the heavy lifting • Top concerns: cost of living, income inequality, and political instability their trust in financial institutions is fragile
Underserved & First-Time Investors (All Target Generation)	• A simplified investing journey built for beginners, with digital tools that are easy to access • Financial education before jumping into investing • Thai language interface with intuitive, easy-to-use design	• Only 26% of Thai Gen Z currently invest in bonds, stocks, or mutual funds • Lack of confidence and afraid of losing money

Market Gap

1. The Savings Trap: High Savers, Low Investors

87.5% of Thais save money, but only 2.6% actually invest. Most people are missing out on long-term wealth building because the habit of "investing" hasn't caught up with the habit of "saving."

2. The Participation Gap : Big Market, Few Players

Thailand has a massive stock market, yet only 2 million active investors exist out of 70 million people. Despite 1.3 million new accounts opening recently, most people still haven't taken their first real step into the market.

3. The Knowledge Barrier : Fear & Debt Overload

High household debt and a lack of financial literacy are the biggest hurdles. Many Thais want to invest but are paralyzed by the fear of losing money and a lack of clear "how-to" guidance.

4. The Trust Crisis: Market Scandals & Volatility

Recent corporate scandals and stock manipulation have shattered investor confidence. In 2025, political instability and global trade tensions further pushed retail investors away from the market.

5. The Advice Gap: Wealthy-Only Advisory

Personalized financial advice is currently a luxury for the rich, leaving 55% of Gen Z without any guidance. While Thailand’s fintech is growing, AI-powered advisory for the average person is still in its infancy.

Business Model

Key Partners

- SCBX Group
  Ecosystem support and bank grade credibility
- Stock Exchanges (SET Global)
  Access to market infrastructure and financial data
- Real time Data Providers
  Market data and financial analytics
- Tech Partners
  Cloud infrastructure and AI model development

Key Activities

- AI Model Tuning
  Develop and optimize Financial LLMs
- Personalized Content Generation
  Create customized insights for each investor
- Growth Engine Optimization
  Analyze user behavior to improve engagement

Value Propositions

- Digital RM for All
  AI-powered personalized investment advisory
- Zero to Hero Path
  Help beginners grow into confident investors
- Trust via Explainable AI (XAI)
  Transparent and understandable investment insights

Customer Relationships

- Personalized Automation
  AI agent provides tailored guidance
- Community & Learning
  Interactive space to learn with AI support
- Seamless Support
  Human like assistance through AI

Customer Segments

- Digital Natives
  Gen Z and young aspiring investors
- “Saver” Group
  Long term savers new to investing
- Retail Investors
  Individuals seeking insights without information overload

Key Resources

- Data Assets
  Market data and customer behavior insights
- InvestX Platform
  Core investment platform and user base
- Financial Experts
  Experts validating AI recommendations

Channels

- InvestX Mobile App
- Social Media Content
  Educational content for new investors
- In App Notifications
- Smart Market Digest
  Daily investment insights

Cost Structure

- AI Infrastructure
  Development and operation of AI models
- User Acquisition (Marketing)
  Marketing and growth campaigns
- Data Subscription
  Financial market data services

Revenue Streams

- Brokerage Fees
  Transaction based revenue
- Subscription Model
  Premium AI investment coaching
- AUM Fees
  Portfolio management fees

- User Acquisition (Marketing): Customer growth and marketing campaigns
- Data Subscription: Global financial data and analytics

- Brokerage Fees: Volume based transaction revenue
- Data Subscription: Global financial data and analytics

KPIs

Category	KPI	Target Outcome
Conversion	Active Investing Conversion	Transitioned >15% of savers into active investors
Trust	AI Explainability Score	Reached >80% user clarity on AI-generated logic
Engagement	Digest Interaction Rate	Achieved 40% responsiveness to daily market news
Growth	CAC Optimization	Slashed customer acquisition costs by 20-30%

Competitor

Feature	Dime!	Webull	Liberator	InnovestX + AI Agent
Ease of Use	High	Low	Medium	High (By AI Agent)
Expertise	Low	High	Medium	High (Human + AI)
Asset Variety	Medium	Medium	Medium	Ultra High
Personalization	Low	Low	Low	Ultra High (Hyper-personalize)

Market Opportunity

Strategic "Idle Money" Conversion

- Stat: 87.5% of Thais save, but only ~2.6% to 9% invest
- Market Insight: A massive liquidity pool remains stagnant in low interest accounts

Democratizing Personalized Advisory

- Stat: 82% of Boomers have advisors, compared to only 45% of Gen Z
- Market Insight: There is a significant "Advice Gap" that only scalable AI can fill

Trust Restoration through Explainable AI

- Stat: 81% of investors demand transparency, but <40% understand AI logic
- Market Insight: "Explainable AI" is the key to rebuilding trust in a volatile market

Precision Growth & User Activation

- Stat: 1.3M new accounts opened annually, yet only 2M out of 70M people are active
- Market Insight: High appetite exists, but a "Momentum Trigger" is needed to activate users

Solution Overview

AI Personal Investment Agent

Transforming InnovestX into a Personal Investment Companion

Many Gen Z investors are interested in investing but feel overwhelmed by complex financial information.

Our solution is an AI Personal Investment Agent that provides personalized portfolio guidance, monthly investment suggestions, and learning support.

User Profile

Confident Investment Decisions

How Beginner Investors Use AI Support

The AI Personal Investment Agent supports users throughout their investment journey from onboarding to continuous portfolio guidance.

1

Onboarding

Users set their investment goals, monthly budget, and risk tolerance.

2

AI Investment Coach

The AI recommends a personalized portfolio and explains the reasoning behind each asset allocation.

3

AI Monthly Investment Plan

Each month, the AI suggests investment opportunities and a suitable DCA strategy based on market analysis.

4

AI Personalized Learning Guidance

The AI explains investment concepts and recommendations according to the user's knowledge level.

5

Confident Investor

Users gradually build both their portfolio and investment knowledge.

AI Investment Coach

The AI Investment Coach acts as a personal financial assistant that helps users build and understand their investment portfolio.

It recommends asset allocation based on the user's goals and risk tolerance while explaining the reasoning behind each investment decision.

- **Personalized portfolio recommendation**
- **Risk-based asset allocation**
- **AI explanation of investment decisions**

Example Scenario

I want to invest 3,000 THB per month.

User

AI

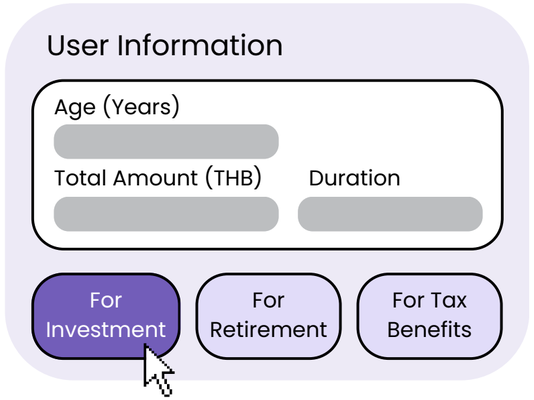

Recommended Portfolio

40% Global ETF
30% Thai Blue-chip Stocks
20% Technology Sector
10% Bonds

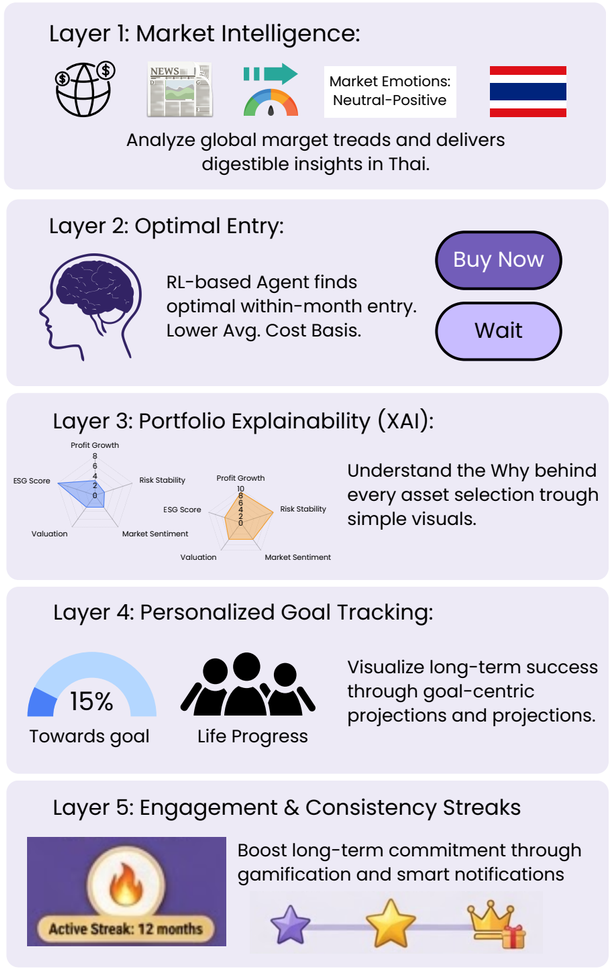

Reason:
Balanced allocation suitable for medium-risk investors.

AI Monthly Investment Plan

Setup & Profile

AI Engine

Market Intelligence:
This serves as the Brain of the operation. By utilizing LangGraph & Sentiment Agents, we aggregate global data from sources like Bloomberg and translate them into digestible, human-friendly Thai insights. It ensures transparency by showing users exactly how the AI perceives current market emotions.

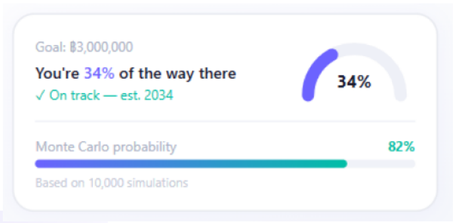

Optimal Entry:
The core innovation. Unlike fixed-date DCA, our RL-based Agent monitors the market 24/7. It applies the Optimal Stopping theory to decide whether to Buy Now or Wait for a better entry point within the month. This ensures a lower Average Cost Basis without the user ever having to lift a finger.

Portfolio Explainability (XAI):
Trust is built through clarity. We use SHAP / XAI Integration to provide a Reasoning Card. Through simple visuals like Radar Charts, we explain the "Why" behind every asset selection, bridging the knowledge gap for first-time investors.

Personalized Goal Tracking:
Every Baht has a purpose. We integrate Gen AI with Predictive Modeling to translate Portfolio Growth into Life Progress. The system visualizes long-term success through goal-centric projections

Engagement & Consistency Streaks:
Transforming investment discipline into a rewarding habit through Gamification & Smart Notifications. Instead of trading frequency, we incentivize Monthly Investment Streaks supported by automated nudges and One-Click Execution to ensure users never miss a milestone.

Personalized Investment Guidance

Investment Guidance

The AI will show the progress of your goal and the likelihood of achieving it.

Planned tax-saving investment (THB)

Expected Retirement Age (Years)

Generate plan

Existing Data

- Personal information and investment experience
- Risk assessment questionnaire
- Goal setting

Additional Data to Collect

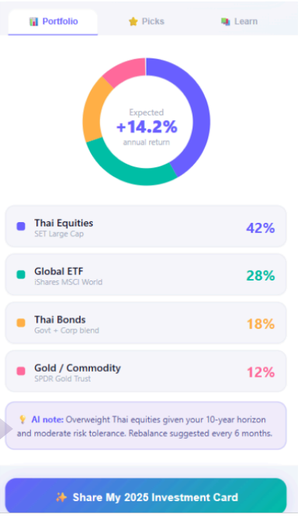

- User expectations, especially target amounts
  - For example: a specific retirement savings goal, or simply the intention to retire without knowing the required amount
- AI guidance to suggest suitable investment strategies aligned with individual risk tolerance

\+ Data derived from the user's past investment history (if any) from Portfolio

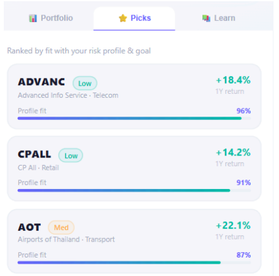

Based on the information provided, the AI can analyze a suitable investment plan, taking into account risk and investment duration, to suggest whether you should hold long-term or trade short-term with higher risk but potentially greater returns.

Portfolio Recommendation

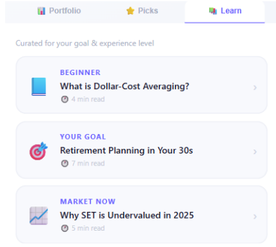

- AI generates personalized portfolio allocation using ***Mean Variance Optimization***
- ***Multiple market simulations*** are run to evaluate the feasibility of achieving the user's goals
- ***Monte Carlo* simulation** is applied to estimate probabilities of success

On portfolio page, there will be an added stock classification feature and 'Share **Investment Card**' button

AI will rank stocks that best suit you by considering factors such as **investment duration, expected returns, and acceptable risk level**, in order to **recommend the most suitable options**. Additionally, it will display the number of people who have invested in or purchased that stock within a similar timeframe, providing extra guidance for your decision-making.

For those who have investment objectives, **including beginners** who want **additional guidance** (or don't know how to get started), **educational materials** and learning resources will be provided for further study

For Beginners: include GenZ

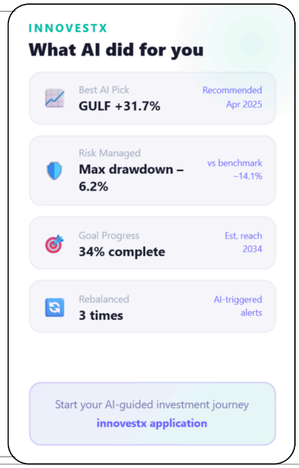

- If the goal is investment, users will input age and acceptable risk level
- AI can then recommend portfolios that may involve higher risk but potentially greater returns
- Models used:
  - ***Random Forest*** → to assess risk profile
  - ***XGBoost*** → to predict future wealth

Investment card

One of the best ways to **promote** is through **sharing**. Therefore, the investment card will be shared. When **friends / close contacts see others using InnovestX, they are more likely to follow suit**, which can **significantly increase the number of sign-ups**.

"Gen Z lives on social media — 94% daily, 85% discover products there, and 70% trust peer-shared content. Social promotion isn't optional; it's the primary channel." (Civic Science, 2025 & Nielsen via inBeat, 2024)

AI Architecture

Data sources

User Data
- Profile (age, income, goals)
- Risk assessment
- Investment experience

Portfolio Data
- Holdings
- Transaction history
- Investment behavior

Market Data
- Stock prices
- ETF / fund performance
- Economic indicators
- News / sentiment

Tax Rules
- SSF / RMF limits
- Tax deduction rules

AI Models

Portfolio Optimization / Personalization Engine

Mean Variance Optimization
Monte Carlo Simulation
- find suitable user's asset allocation

Risk Profiling

Random Forest
- classify user risk level
- conservative / moderate / aggressive

Return Prediction

XGBoost
- estimate expected portfolio growth
- predict goal achievement probability

Market Intelligence

NLP / Sentiment Analysis
- analyze news and market sentiment

Decision Engine

Portfolio recommendation

Monthly investment suggestion

Investment - Retirement - Tax optimization advice + Learning recommendation

User Interface

Investment Coach

Goal Progress Dashboard

Personalized Learning

Explainability & Oversight

Explainable AI
SHAP explanation
- Reasons behind recommendations

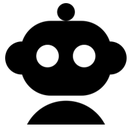

Compliance & Human Oversight
- Compliance checks
- Advisor monitoring

AI Outputs
- Adaptive personalization
- Behavioral nudging
- Retirement & Tax optimization

Human-in-the-Loop

85%	3×	99.2%
Fraud Detection Accuracy (AI)	Fewer False Positives	Compliance Pass Rate

AI Trustworthiness & Error Reduction Framework • InnovestX

AI Recommendation

Analyze & Generate Recommendations

- Use **ML model** to analyze customer data
- Generate recommendation / prediction
- Output is NOT a final decision yet

e.g. "This customer has 85% fraud risk"

Compliance Check

Policy & Regulation Checkpoint

- Verify AI does not violate laws / policy
- Check for fairness & bias (gender, race)
- Validate **business rules** & data usage

e.g. Reject if AI decision is based on gender/race

Advisor Oversight

Human Makes the Final Decision

- Expert **reviews** AI reasoning & output
- Can Approve / Modify / Reject recommendation
- Holds legal accountability for the decision

e.g. Loan officer decides whether to follow AI

⚠ ↓ Reduce Error Risk | Transparent & Accountable | Regulation Compliant | Scale Without Extra Headcount

Implementation & Future Roadmap

Virtual Banking Integration

- Leverage Thailand's upcoming 3 Virtual Bank licenses launching by mid-2026.
- Integrate AI-powered investment services into digital banking ecosystems to reach unbanked and SME segments.

The Active Investor Activation

- Target the 87.5% of Thais who save but do not yet invest.
- Simplify the transition with a guided Zero-to-Hero onboarding experience

Social & Subscription Growth

- Execute Social Learning marketing via TikTok, YouTube, and Facebook to capture Gen Z and Millennials.
- Diversify revenue through Subscription Models, including AI Premium Coaching and automated Portfolio Management (AUM) fees.

Risk Management & Mitigation

Risk Category	Mitigation Strategy
Trust & Clarity	Deploy Explainable AI (XAI) with SHAP integration to provide clear reasoning for every decision.
Model Errors	Implement Human-in-the-Loop framework where human advisors review and approve AI outputs.
Compliance	Maintain a 99.2% Compliance Pass Rate by ensuring AI adheres to financial regulations and remains unbiased.
Market Volatility	Use Real-time Sentiment Analysis to detect market mood and adjust strategies dynamically.
